 Lomé, Togo

PROFESSIONAL SUMMARY

Software Engineer specialized in mobile and backend development, with over 2 years of experience designing and developing mobile applications, backend services, and web solutions. Hands-on experience with **Kotlin, Kotlin Multiplatform, Compose Multiplatform, Java, and Spring Boot**, with expertise in REST API design, software architecture, data management, and third-party service integration. I designed and developed **CanjiX**, a production e-commerce platform used by more than **700 users**, as well as several mobile applications and business systems. Accustomed to working across the entire development lifecycle, from design to implementation and deployment of software solutions.

TECHNICAL SKILLS

LANGUAGES

Kotlin · Java · SQL

BACKEND

Spring Boot · Spring Security ·
REST APIs · JWT · PostgreSQL ·
Redis

MOBILE

Kotlin Multiplatform ·
Jetpack Compose ·
Compose Multiplatform ·
Android · iOS

ARCHITECTURES

MVVM · MVI · MVC · Clean
Architecture · Offline-first

INFRASTRUCTURE & TOOLS

Docker · Git · GitHub · GitLab ·
Firebase · AWS S3 · Postman

SOFT SKILLS

Communication · Teamwork · Attention to Detail · Adaptability

EXPERIENCE

MONITRACK – FINANCIAL TRANSACTION MANAGEMENT APPLICATION - FREELANCE

Client, Lomé - Togo | 02/2026 - 05/2026

Context : Design and development of MoniTrack, a cross-platform mobile application dedicated to managing client accounts, financial transactions, and operational tracking for an organization. The application distinguishes between CLIENT, ADMIN, and SUPER_ADMIN roles and centralizes the tracking of balances, transactions, and administrative activities.

- Developed a secure authentication system with Firebase Authentication, including role and permission management, user sessions, logout, and biometric authentication (fingerprint / Face ID).
- Designed a user management system with account creation, editing, archiving, and reactivation, featuring differentiated access rights between ADMIN and SUPER_ADMIN.
- Implemented offline-first functionality with Room for Android/iOS, synchronized with Firebase Firestore, including schema migration management and local persistence of users, transactions, and actions.
- Developed a history module with filtering by period, transaction review, and financial report generation in PDF format, tailored for clients, administrators, and super admin accounts.

Technologies : Kotlin · Kotlin Multiplatform · Jetpack Compose Multiplatform · Firebase Authentication · Firebase Firestore · Firebase Cloud Functions · Room · Koin · Coroutines · Android · iOS · MVI

PROCEDURAL WORLD LAB – DESKTOP LAUNCHER – FREELANCE

Procedural World Lab, Lomé – Togo | 07/2024 – 01/2025 | Refonte 07/2026 – 10/2026

Context : Development of a cross-platform desktop launcher dedicated to the distribution and management of Procedural World Lab products for Unreal Engine. Collaborated with backend and frontend teams to ensure functional and visual consistency between web and desktop interfaces.

- Authentication and account management directly integrated into the launcher.
- Integrated store with product browsing and purchasing via WebView connected to the sales platform.
- Download system with download tracking, progress monitoring, error handling, and download limit control.
- Automated extraction and installation of products directly into the user's projects.
- Unreal Engine project management with automatic project scanning, .uproject file detection, and project organization.
- Product lifecycle management: purchase, download, installation, and access to previously acquired products.
- Cross-platform architecture based on Kotlin Multiplatform and Compose Multiplatform, with layer separation and progressive integration of desktop services.

Technologies : Kotlin · Kotlin Multiplatform · Compose Multiplatform · Material 3 · Coroutines · Koin · Unreal Engine · WebView · MVI.

CANJIX – E-COMMERCE ECOSYSTEM AND MARKETPLACE – PERSONAL ENTREPRENEURIAL PROJECT

CanjiX, Lomé – Togo | 2024 – Present

General Context : Design and development of CanjiX, an e-commerce ecosystem for the West African market. The platform is built on an architecture separating the mobile application, REST API, public website, and admin CRM to ensure better maintainability, independent evolution of interfaces, and a clear separation of responsibilities. Personal entrepreneurial project developed and maintained in production with 700+ users since April 2026.

1. CanjiX Mobile Application

Context: Development of the mobile application for CanjiX customers, covering product discovery, cart management, order placement, payment, and purchase tracking.

- Cross-platform development with Kotlin Multiplatform (KMP) and Jetpack Compose Multiplatform to share business logic and UI between Android and iOS.
- Implemented authentication synchronized with the REST API.
- Developed a catalog for browsing products, categories, variants, and attributes.
- Managed product variants, attributes, and available/unavailable combinations.
- Developed the cart with quantity management, selected variants, and amount calculation.
- Implemented the order process and tracking of various processing states.
- Integrated payment methods suited to the West African market.
- Integrated delivery logic and order tracking.

Technologies : Kotlin · Kotlin Multiplatform · Jetpack Compose Multiplatform · SQLDelight · Koin · Coroutines, Firebase Cloud Messaging (FCM), Facebook SDK · MVI

2. CanjiX REST API

Context : Development of the central backend responsible for all business logic and exposing data to client applications.

- Authentication and security with 2FA via email and SMS, API Keys, JWT, refresh token, rate limiting.
- Managed product catalog, categories, variants, and attributes.
- Managed orders and their various states, stock and warehouse management.
- Integrated payment services.
- Controlled delivery data and logistics tracking.
- Implemented validation, security, and access control mechanisms.

Technologies : Spring Boot · Java · PostgreSQL · Redis · Docker · REST API · AWS S3 · WebSocket · Flyway · Spring Security · JPA · MVC

3. CanjiX Landing Page

Context : Development of the public website designed to showcase CanjiX, promote the platform's products and services, and improve its visibility among users.

- Presentation of CanjiX, how it works, and its services.
- Presentation of available delivery and payment solutions.
- Optimized site structure for SEO and marketing campaigns.

Technologies : Next.js · React · TypeScript · CSS

4. CanjiX CRM / Back-office

Context : Development of an admin interface enabling CanjiX teams to manage the platform's commercial, logistics, and administrative operations.

- Administration: management of users, roles, permissions, and internal operations.
- Catalog & orders: management of products, categories, variants, attributes, orders, and processing tracking.
- Payments & logistics: tracking of payments, transactions, deliveries, and logistics operations.
- Marketing: management of promotional campaigns and offers.
- Operational centralization: consolidation of tools needed for the day-to-day management of CanjiX.

Technologies : Next.js · React · TypeScript · REST API · PostgreSQL · Redis · Docker

RS BUSINESS – STORE MANAGEMENT MOBILE APPLICATION - INTERNSHIP PROJECT

Boutique RS BUSINESS, Lomé - Togo | 2024

Context : Design and development of RS Business, a management mobile application for retail stores, aimed at centralizing daily store operations and facilitating the tracking of products, stock, and sales. RS Business is a store located in Lomé.

- Implemented a product management system to record and view items available in the store.
- Managed and tracked stock levels to maintain an up-to-date view of available products and facilitate inventory control.
- Implemented sales management and tracking of commercial operations carried out in the store.
- Structured the application around a business logic framework to allow progressive evolution toward more advanced commercial management features.

Technologies : Kotlin · Android · Jetpack Compose · SQLite / Room · Coroutines · MVVM

EDUCATION

2025	2021 - 2024	2020 - 2021
CERTIFICATION IN KMP AND CMP	BACHELOR'S DEGREE IN SOFTWARE ARCHITECTURE (AL)	BAC SÉRIE D (FRENCH BACCALAUREATE, SCIENCE TRACK)
Kotlin Multiplatform (KMP) and Compose Multiplatform (CMP) – Udemy	Ecole Supérieure de Gestion, d'Informatique et des Sciences (ESGIS - TOGO)	High School Diploma from Ecole Privée Laïque Mon Devoir, Lomé, TOGO

LANGUES

French Native / Fluent	English B1 (Intermediate)	Hausa Native
